

Lynx Indicator Light Tree

The Lynx Indicator Light Tree is a machine mountable, visual process indicator that is available in voltages of 24 VDC or 120 VAC. This simple to install product allows the status of a running molding machine to be clearly viewed from a distance on the plant floor. It is designed to be used with an eDART System™ or eDARTflex™ System and works in conjunction with eDART™ software to indicate if your process is running within it's preset limits.

The process status is indicated by the colored lights of the light tree. A green indicator light tells you the process is running within it's preset limits. A yellow indicator light means there is a potential problem and closer inspection is recommended. The red indicator light alerts plant floor personal to a problem with the process that needs immediate attention.

The light tree provides molders with more freedom to attend to other projects on the plant floor, while still keeping an eye on running jobs.
