

## eDART Data Manager

RJG's eDART Data Manager (EDM) is a complete hardware and software solution for networking and managing your eDART network. With the EDM, getting an eDART up and running is as simple as plugging it into the network.

The eDART Data Manager will become the center piece of your eDART network, providing a single, simple interface to perform all the functions needed to access, support and use the eDART.

With dual network cards the EDM can become the gateway between your existing plant network and the eDART network.

RJG's Advanced System Overview (ASO) comes with the EDM. With ASO you can view all of the eDARTs on your network from the web browser on your desktop. You can see which presses are down and for how long, what jobs they are running, number of good cycles, reject cycles, etc.

The ASO's Process Viewer allows you to view the current process running on any eDART with real time cycle and summary data.

### Features and Benefits

- 500GB of file space for backing up critical data (Upgradable)
- Dual network cards
- Automatic backup of all eDART data
- Cross Copy for managing your mold files, templates, etc.
- Advanced System Overview with the Process Viewer
- Time synchronization of all eDART's on the network
- CD/DVD burner drive holds up to 4.7GB of data

| Machine Name         | Mold Name            | Machine State | Sorting St... | Alarm State  | Total Cycles | Good Cycles | Alarm Cycles | Process Match Center |
